Smith Meter® Turbine Meters

1.5" to 4" Guardsman[™] (G) Series

Specifications

Issue/Rev. 1.0 (11/10) Bulletin SS02002

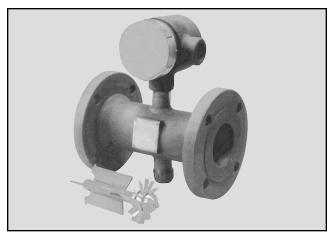

The Smith Meter® Guardsman Series Turbine Meter is a bladed, rotor-type meter which utilizes an upstream, cantilevered stator to support the tungsten carbide, bearing-mounted rotor. It is intended for a wide range of petroleum, petrochemical, and chemical custody transfer measurement applications, such as small product pipelines ranging from Natural Gas Liquids (NGL) to light fuel oils.

Features

- Stainless steel measuring chamber and internals.
- Locking stator to prevent wear and improve performance.
- Tungsten carbide bearing system provides long life on low lubricity liquids.
- Hydrodynamic thrust balance to minimize friction and wear on thrust bearings which allows for long service life and high accuracy.
- 125-250 AARH Flange Face Finish.

Options

- Bidirectional flow allows the meter to accurately register flow in either direction.
- Multiple pickup coils are used when direction sensing or pulse security is required.
- NACE compliance may be necessary when dealing with liquids containing hydrogen sulfide. The meter has housing materials which are certified to be in compliance with the material requirements set forth in NACE Standard MR-01-75 latest revision.
- Premium ±0.15% and Super Premium Linearity ±0.10%.
- AccuLERT ID-2000 Smart Preamplifier for real-time diagnostics of meter performance.

3" Model Code K2BDA

Linearity

	Normal Flow Range
Standard	±0.25%
Premium	±0.15%
Super Premium (3" and 4" ONLY)	±0.10%

¹ Based on 0.8 sp. gr., 1.5 mPa·s (1.5 cP) liquid.

² Metric units are nominal and may not convert precisely.

³ a. For **bidirectional flow**, the linearity in the reverse direction is ±0.25% and the mnimum linear flow rate is 20% of the normal maximum linear. b. From Normal Minimum to **Extended Maximum**, the linearity is normally not degenerated.

c. Extended Minimum is the flow rate at which the meter can provide a reliable signal, but accuracy (linearity and repeatability) may be diminished.

Repeatability

±0.02% over the entire normal range.

End Connections

Class 150, 300, 600, 900 ANSI B16.5, 125-250 AARH finish raised face (RF) flanges.

PN 16, 25, and 40 DIN 2526 Form C flanges.

PN 63, and 100 DIN 2526 Form E flanges.

Maximum Working Pressure⁴ - PSI (kPa)

ANSI	Carbon Steel Flanges	Stainless Steel Flanges

Pickup Coil & Preamp with 24" Standoff	-20°F to 225°F -29°C to 107°C	-40°F to 225°F -40°C to 107°C

Consult factory for higher temperatures.

Approvals

UL/CUL, Listed 557 N – Class I Groups C and D; Class I, Zone I, Group IIB; Class I, Zone I, AExd IIB T6 IP66; UNL-UL ENCL. 4, CNL-CSA ENCL. 4; Tamb -50°C to 70°C.

ATEX / IEC Ex

PTB 08 ATEX 1034X, IEC Ex PTB 08.0040X Ex d IIC T6 Tamb = -40°C to 70°C IP66.

Essential Health and Safety Requirements

EN/IEC 60079-0: Electrical apparatus for potentially explosive atmospheres – General requirements.

EN/IEC 60079-1: Electrical apparatus for potentially explosive atmospheres – Flameproof enclosures 'd'.

EN 60529: 1992. Degrees of protection provided by enclosures (IP code).

EMC Compliance: (by Council Directive 2004/108/EC)

Electromagnetic Emissions: EN 61000-6-3. Electromagnetic Immunity: EN 55022.

IEC 61000-4-2: Electrostatic Discharge (ESD), Level 3+ (8.0 kV by contact, 12 kV by air).

IEC 61000-4-3: Radiated Electromagnetic Field, Level 3 (10 V/m).

IEC 61000-4-4: Electrical Fast Transient (Burst), Level 2 (1kV). **IEC 61000-4-5:** Electrical High Energy Pulses (Surge), Installation Class 3, Criterion B.

Materials of Construction

Body	300 Series Stainless Steel
Flanges	Carbon Steel Optional: 300 Series Stainless Steel
Internals	300 Series Stainless Steel, Except 430 Stainless Steel Blades and Cones
Bearings and Thrust Washers	Tungsten Carbide Journal and Bearings

Installation

The meter must be mounted in a horizontal attitude $(\pm 5^{\circ})$ within a suitable flow conditioning assembly. It is recommended that the meter be installed downstream of a strainer for protection and upstream of the flow control valve in the system.

Refer to the installation manual for full instructions.

Applications

High Viscosity

The flow range of turbine meters is reduced considerably when metering viscous liquids.

The minimum flow rate must be increased as the viscosity increases. The following relationships can be used to approximate the increase (reduction in range) that will maintain the stated linearity.

Viscous Min. = Normal Min.
$$x = \frac{\text{Viscosity (cP)}}{\text{Meter Size (in)}}$$

Note: Caution should be used when dealing with liquids that result in a viscous minimum rate greater than two times the normal, since variations in operating temperature can result in substantial meter factor shifts.

Low Density

When metering light hydrocarbons such as LPG or other liquids with specific gravity less than 0.8, the flow range should be shifted upward. The amount of shift can be approximated by multiplying the normal minimum and maximum flow rates by the following factor:

Rate Increasing Factor =
$$\frac{0.9}{\sqrt{S}}$$

Where: S = The specific gravity of the liquid being metered.

Minimum Back Pressure

In order to prevent cavitation, API M.P.M.S. Chapter 5 recommends a minimum back pressure according to the following:

$$BP = (2 \times \Delta P) + 1.25 \text{ Vp}$$

Where: BP = Minimum back pressure

ΔP = Pressure drop at maximum flow rate
 VP = Absolute vapor pressure at operating temperature

Example:

3" Guardsman at 1,000 BPH - $\Delta P = 4$ psi.

Absolute vapor pressure of butane at operating temperature - Vp = 50 psia.

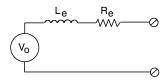

$$BP = (2 x 4) + 1.25 (50)$$
$$= 70.5 psig$$

Page 2 • SS02002 Issue/Rev. 1.0 (11/10)

⁴ Maximum working pressures are for temperatures of -20°F to 100°F (-28°C to 38°C). Consult factory for maximum working pressures at other temperatures.

Pickup Coil Specifications

Type: Variable reluctance.

Electrical Characteristics

Effective Series Resistance (R_s): 1,200 Ω (±10%).

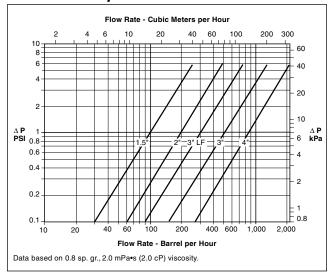

Effective Series Inductance (L_a): 400 mH @ 1,000 Hz.

Minimum Open Circuit Voltage (V_o): 300 millivolts p/p at minimum flow rate.

Maximum Transmission Distance: 2,000 ft (610 m) using #20 AWG two-conductor, shielded cable.

Note: A preamplifier is recommended for remote instrumentation that does not have Common Mode Noise Rejection. See Bulletin SS02006 for PA4 Preamplifier Specifications.
